Inabathini Lalitha Maha Dev

Profile Intro

A Data Professional with around 6+ years of experience in shaping and optimizing data ecosystems with a major experience in Informatica SaaS MDM (IDMC) (Business 360, Customer 360, Data Integration, Data Quality, Data Profiling, Application Integration, Reference 360) and Informatica MDM.

MDM (Master Data Management) On-Prem & Informatica Intelligent Cloud Services (IICS): My predominant experience is in Informatica's cloud-based platform to streamline data integration, data quality, and data governance.

- Worked closely with Project Senior architect, Business team and involved in data modeling discussion and created data models for projects.
- End to End Business 360 Configurations for Business Entity for match rules, Data quality, Validation rules, Survivorship and creating Ingress, Egress and Business Events. • Experienced in Customer 360 UI & Reference 360 components customization.
- Experienced in creating Reference data sets, Code lists, Dependent Reference Entities, RDM Import and Export jobs.
- Hands on experience in creating Hierarchies and well versed in creating Mappings using various Transformations like source qualifier, Joiner, union, expression, filter, router, and lookup using Informatica Cloud Data Integrator.
- Worked on creating Audit trail setup for Task flows in IDMC and Connections Parametrization & Scheduling task flows using Cloud Data Integrator and Cloud Application Integrator.
- MDM Hub configurations - Data modeling, Data Mappings, Data validation, Match and Merge rules, Hierarchy Manager.
- Hands-on experience in design and configuration of landing tables, staging tables,base objects, hierarchies, foreign-key relationships, lookups, query groups, queries/custom queries, and packages.

My expertise spans also a wide range of Data Transformation Technologies, including:

ETL/ELT Tools like Matillion, Informatica: Proficient in utilizing Matillion to design and orchestrate efficient Extract, Transform, Load (ETL) processes, facilitating seamless data movement and transformation. Customer Data Platforms like Simon Data, CDP (Customer Data Platform) & Telium.

TECHNICAL SKILLS

Cloud Integration Technologies/Tools	IDMC, Informatica MDM Hub Console, Matillion- ETL, Power Bi, SNOWFLAKE, AWS-lambda, Reltio MDM, Workato.

Developments Language	HTML, CSS, SQL, Python.

CERTIFICATIONS

- Informatica MDM master data management) C360 SaaS (Software as a Service) Implementation Practitioner Certification – Informatica.
- Amazon web services cloud practitioner - amazon web services (AWS) issued Jan 2022 - expires Jan 2025 RQC04RKD3BFQQPCQ.
- Cloud Data Warehouse & Data Lake Modernization by Informatica University
- Data Engineering Foundation Certification.
- Cloud Integration for Application Modernization by Informatica University.
- Cloud Integration for Modern Applications: API Integration, Process Automation.
- Cloud Modernization: Cloud Data Quality & Data Governance.
- Data Governance and Privacy: Data Democratization.
- Reltio - Technical Consultant Certification.

Education B.TECH (Mechanical) , Lendi Institute of engineering and technology.

Technologies IICS (Informatica Intelligent Cloud Services), Matillion, Reltio MDM, MDM, Power BI (Business Intelligence), Snowflake, Jira, Oracle SQL Developer, MDM Hub console.

EXPERIENCE

Organization: Virtusa Role - Senior Software Engineer
Organization: Blumetra Solutions Role - Associate Data Engineer

Projects & Responsibilities

Name & Duration: Lloyds Banking Group LBG /RDM May2024 – Till Date

Role: MDM/RDM Developer.

Project Overview: Lloyds Banking Group, a client from the UK, wanted to consolidate its customers to maintain data from multiple sources to GCP(Google Cloud platform). They wanted to build a centralized Reference data in R360 of Informatica's IDMC/SaaS version.

Environments: IDMC (Business 360, Customer 360, Reference 360, Cloud Data Quality, Cloud Data Integration, Application Integration), AWS S3, Azure DevOpps.

Responsibilities:

- Worked closely with Project architect, Business team and involved in design discussions.
- Source data analysis and Data quality rule configurations using Informatica Cloud Data Quality.
- Created Dependent Reference data sets and Dependent code lists in R360.
- Created Cross-Walks for the Reference Datasets which are configured in Business Entity.

Projects & Responsibilities

Name & Duration: CW MDM/RDM – Card Works A

Role: MDM Developer.

Project Overview: Card Works, a client from the USA, wanted to consolidate its customers to maintain data using Business Entities and Reference data in Informatica's IDMC/SaaS version.

Environments: IDMC (Business 360, Customer 360, Reference 360, Cloud Data Quality, Cloud Data Integration, Application Integration), AWS S3, Azure DevOpps.

Responsibilities:

- Worked closely with Project architect, Business team and involved in design discussions. • Source data analysis and Data quality rule configurations using Informatica Cloud Data Quality. • Created Dependent Reference data sets and Dependent code lists in R360.
- Used CDI to create various mappings using different Transformations like Lookup, Expression, Filter, Router etc.
- I worked on building parameterized jobs in IICS using mapping tasks.
- Created Business entities in B360 and configured them in C360 pages.
- Security Configuration for Business entity at attribute level access based on the roles. • Created Custom workflow processes for Business events in Application integration and configured them in B360.
- Created the MDM egress, RDM Imports and Exports jobs using Business 360 and Reference 360. • Tested mappings to assure that data is loaded as per ETL Specifications and created Unit test docs.

Name & Duration: EDP & IB Analytics

Role: ETL Developer

Project Overview: Saama 8x8 (V8 Migration) is a total data migration project where the client data from older version of Salesforce to Vlocity 8 version of Salesforce are fully validated and a complete end to end data migration is to be achieved using ELT technologies like Matillion and Data platforms like snowflake.

Environment: Snowflake, Treasure Data, Matillion, Salesforce, Power BI.

Responsibilities:

- I worked on Data Integration from sources like Salesforce transformed the data by the logical modeling for job design and replicated the same in the target environment.
- I have built Transformation Jobs in Matillion and worked on the metadata framework changes in the orchestration jobs.

Name & Duration: The Bank of Missouri

Role: MDM Developer.

Project Overview: TBOM is a banking customer with a requirement to consolidate its customers data using Informatica's IDMC/SaaS version.

Environment: IDMC (Business 360, Customer 360, Cloud Data Quality, Cloud Data Integration, Data profiler, Application Integration), Snowflake.

Responsibilities:

- Worked closely with Project architect, Business team and involved in design discussions. • Built Data Profiling jobs & analyzed source data and created the data quality rules by using Informatica Cloud Data Profile / Cloud Data Quality.
- Integrated the StrikeIron web service calls for validating the Emails & Phone numbers. • Performed ETL on data from various source systems (Salesforce & Jack Henry) and loaded it into Raw, Cleansed zone & MDM Person object using IDMC Services.
- Used CDI to create various mappings using different Transformations like Lookup, Joiner, Aggregator, Expression, Filter, Router.
- Built the Ingress, egress, Match & merge jobs using and configuration of Match Rules, Data quality & Validation rules, Survivorship in Business 360.
- Customer 360 UI Page customization & changes in B360.
- Tested mappings to assure that data is loaded as per ETL Specifications and created Unit test case documents.

Name & Duration: Migration Factory (Internal Product)

Role: MDM Developer.

Project Overview: Migration Factory is an Internal Product of Blumetra. A tool for Informatica MDM On- Prem users to migrate their data to the Informatica IICS without losing any Meta data and the corresponding configurations and helps them migrate hassle free. Worked on the MDM On-prem hub console and configuration to populate the Golden Records from raw data. Analyzed the data and performed data validations and data quality rules and migrated the data from On-prem hub to IICS.

Environment: MDM On-Prem Hub Console, IICS (Informatica Intelligent Cloud Services), Cloud Data Integration.

Responsibilities:

- Base Object Configurations for Match & Merge, Validation Rules Set up and Attribute level along with staging & Landing table configurations.
- Hierarchy setup in the On-prem and SOAP UI Configuration.
- Duns Validation and Data Model set up.

Name & Duration: Informatica Customer Master Phase2 (POLARIS)

Role: MDM Developer.

Environment: Informatica MDM On-Prem Hub Console, IICS (Informatica Intelligent Cloud Services), Cloud Data Integration, Oracle SQL, CyberDuck, Postman.

Project Overview: Informatica Employer (Blumetra Solutions, Hyderabad).

Project: Green field Implementation and Migration of existing version of Customer data to IDMC from On-prem version. Improvements to the Customer master include data enrichment from third party sources SFDC, OC, DNB (Duns & Bradstreet).

Responsibilities:

• Worked closely with Business users in Understanding designing the mapping in CDI. • Created and Configured Workflows and transported the data to target using Informatica Workflow Manager and a complete end to end custom workflow setup in CAI.

• Data migration - Includes migration of data from On-Premises environment to C360. Data validation in several Informatica Mappings to check the business conditions.

• Documenting the Functional testing plan and then Writing, executing, documenting the results, and Logging defects.

• Testing the source and target databases for conformance to specifications.
